Objectives

- Follow the standard process for African American genealogical research
- Use five strategies for successfully locating your ancestors in historical records
- Organize and evaluate your research results
- Find unique African American sources

The Research Process

- Gather known information—start with yourself, then ask your relatives
- Choose a research goal—ask a specific question
- Find new information—search historical records
- Evaluate new information—decide what the evidence means and whether it is reliable
- Share new information—learn even more

Organize Your Research

- Create a research plan—use your goal to decide what records to search
- Prepare a research log—this will help you remember what you searched and find it again
- Find new information—use reliable, original sources and compare them to each other
- Record what you find—write down everything, even if you do not know whether it is important

Evaluate the Evidence

- To whom does this apply?
- What does it mean?
- Does this evidence fit with what I know?
- Is there conflicting data?
- Can I trust this information?
- What clues does this give me for future research?

Research Strategies

- Go from the known to the unknown—follow the paper trail starting with the most recent records and move back in time
- Search every available record—different records often contain different clues, even if the main information is the same
- Find all known family members—records of siblings can contain missing information about parents and other relatives
- Be aware of name changes—after the Civil War, many African Americans chose new names. Some changed their names often throughout their lives.
- Study the local history—to understand migration, laws and customs, and occupations
